IntelliTrac P1

Mini Tracker

Key Chain Tracker

How it works for you and enterprise?

Trubearing range of personal tracker is a small device that allows you to remotely track the position of a loved one, pet, asset or any other valuable asset in real-time through the Internet or by SMS. The tracker combines the technology of global positioning satellites (GPS), mobile phone communication and Internet in a compact device that upon request can transmit its exact location in seconds to give a complete solution.

Using the very best of GPS and mobile technology, at any time of day or night, you will be able to locate someone by SMS the tracker. The tracker uses assisted GPS (global positioning system) technology to accurately calculate its location and uses the mobile phone network to send that location to your mobile phone. In order for the tracker to work at its optimum, it also requires good mobile phone coverage.

Live tracking using your mobile phone for:

- **Loved Ones** – young children, teenagers, children study in oversea & family holidaying in oversea
Be able to track your young loved ones just for reassurance. Lost in a foreign city, or being threatened, "Panic Button" can be used to help to locate them.

- **Pets**
Simply attach the tracker to your dog's collar, and get peace of mind in knowing where your pet is at all times.

- **Family member & elderly with undiagnosed health conditions**
Family member who suffer from Alzheimer's tend to wander off, or fall to the ground when attack by epilepsy. With built-in 3D G sensor, an alert will be sent to locate them in the event there is cause for concern.

- **Cars, valuable assets, luxury goods on the move**
Simply place the tracker on your expensive item and track it in the event it gets stolen.

- **Fleet Management**
Want to see where your trucks are? Have them carry a tracker and you will be able to follow their whereabouts.
